KARMA YOGA FIELD PROJECT

PGPM 2026 - 2027 | NOBLE NAYAKAS

Course Faculty	Dr Arulsamy.
Faculty Mentor	Prof. Rajeshwari K rajeshwari.k@greatlakes.edu.in
Batch	PGPM 2026–2027
Group	Noble Nayakas
Project No.	Project 5
Project Title	**Rural Healthcare Access & Enterprise Development Initiative**

Project Description

The "Rural Healthcare Access & Enterprise Development Initiative" is a community-focused development project implemented across Karmayoga adopted villages in Thirukalukundram taluk within Chengalpattu district. The initiative aims to strengthen rural well-being by improving access to primary healthcare services while also promoting sustainable livelihood and small-scale enterprise opportunities for local residents.

On the healthcare side, the project focuses on enhancing outreach through periodic medical camps, preventive health screenings, maternal and child health support, and awareness programs on hygiene, nutrition, and non-communicable diseases. It also works toward improving linkages between village populations and nearby government health facilities, ensuring timely referrals and better continuity of care.

In parallel, the enterprise development component supports income generation by encouraging self-help groups, skill-building programs, and micro-enterprise activities such as food processing, tailoring, and local service-based businesses. Training sessions and financial literacy programs are included to help individuals—especially women and youth—build stable and scalable livelihoods.

Overall, the initiative seeks to create a dual impact: healthier communities and stronger rural economies, enabling long-term resilience and improved quality of life across the villages in the region.

Project Objectives

The key objectives of the Rural Healthcare Access & Enterprise Development Initiative in villages of Thirukalukundram taluk are designed around improving both health outcomes and rural livelihoods in an integrated way:

- Improve access to basic and preventive healthcare services for rural communities by strengthening outreach systems, organizing regular health camps, and ensuring early detection and management of common illnesses. This includes improving maternal and child health, nutrition awareness, and health education at the village level.

- Bridge the gap between rural populations and formal healthcare systems by improving referrals, increasing awareness of available government health services, and encouraging timely medical intervention.
- Promote sustainable livelihood opportunities through skill development, entrepreneurship training, and support for micro-enterprises, with special focus on empowering women self-help groups and rural youth.
- Build community capacity and financial independence through training in financial literacy, business planning, and market linkages so that small enterprises can become viable and scalable.
- Create a holistic rural development model where improved health and stronger economic opportunities reinforce each other, leading to better quality of life and long-term resilience in villages across the taluk.

Expected Outcomes

- Improved health status in rural communities, reflected in earlier detection of illnesses, reduced preventable diseases, better maternal and child health indicators, and increased awareness of nutrition, hygiene, and preventive care practices.
- Increased access to reliable healthcare services, with more villagers utilizing primary health centers, attending regular medical camps, and receiving timely referrals for advanced treatment when needed.
- Higher household incomes and stronger local economies through the growth of micro-enterprises, self-help group activities, and small-scale rural businesses supported by training and skill development.
- Greater women's and youth empowerment, with more participation in self-employment activities, improved financial literacy, and enhanced decision-making capacity within households and communities.
- Healthier, more economically stable, and self-reliant rural communities, where improved healthcare access and enterprise development reinforce each other for long-term sustainability.

Instructions for Students

1. Please fill out this form carefully with details about your proposed business/project.
2. Provide accurate information wherever applicable.
3. All mandatory questions must be completed before submission.

Karma Yoga / Project Title	Rural Healthcare Access & Enterprise Development Initiative
Name of Business	Basic Community Health Support Center
Type of Business	Community Health Screening and Preventive Healthcare Service

Section 1: Basic Information

Student Name(s):	FT272009 – SRESHTA B FT275006 – VISHAL PRAKASH GUPTA FT272057 – BALAJI M FT272015 – ROHAN TAYAL FT272016 – AKHIL ATHREYA FT272017 – HARSHRAJ SHRIVASTAVA FT272018 – ARITRA PAL FT272020 – SUKRUTI PATNAIK FT272022 – NAMAN FT272025 – ADITI GOEL FT272026 – ISHITA
Village / Location:	Naduvakkarai
Taluk:	Thirukalukundram Taluk
District:	Chengalpattu
Pin Code:	603102
Local Contact Details:	Mrs. Kupammal – 7305403115
Date:	06/08/2026

Section 2: Business Idea

2.1 What is your business idea? (Describe in simple words what you plan to do.)

Set up a Basic Community Health Support Center in Naduvakkarai village, equipped with essential devices such as a blood pressure monitor, glucometer, pulse oximeter, weighing scale, and height measurement equipment, to provide first-level health screening and preventive healthcare guidance to villagers.

2.2 What problem does it solve in the community?

Villagers currently lack easy access to basic health screening and often seek medical attention only after their condition becomes serious. This center closes that gap by offering regular, affordable screening for conditions such as hypertension, diabetes, and low oxygen levels, closer to home, with timely referral to the nearest hospital when needed.

2.3 Why did you choose this idea?

Naduvakkarai village has no nearby facility for routine health monitoring, and the closest hospital is about 3 km away. With Mrs. Subhashini, an Auxiliary Nurse Midwife (ANM) associated with RUWSEC, already based in the village, this idea builds on existing community trust and health expertise to make preventive care accessible and sustainable.

Section 3: Community & Market Understanding

3.1 Who are your customers? (e.g., farmers, households, youth, rural/urban, etc.)

Residents of Naduvakkarai village and surrounding areas, including elderly individuals, daily wage workers, women, and families who need regular health monitoring but have limited access to nearby healthcare facilities.

3.2 What are their needs?

Affordable, accessible, and regular health screening (blood pressure, blood sugar, oxygen levels, weight, and height) along with clear guidance on when and where to seek further medical treatment.

3.3 Are there similar businesses nearby? (Circle one: Yes / No)

YES / NO	NO Similar basic health screening facility currently doesn't exist within Naduvakkarai village.

3.4 What makes your business different or better?

Unlike the nearest hospital, which is about 3 km away, this center is located within the village itself and staffed by a trusted local ANM, making basic screening more accessible, affordable, and convenient, with home visits offered for those unable to travel.

Section 4: Product or Service Details

4.1 What product/service will you offer?

Basic health screening services: blood pressure checks, blood glucose testing, pulse oximeter (oxygen saturation) checks, weight and height measurement, and monthly health awareness sessions.

4.2 How will it be produced or delivered?

A trained volunteer/health worker (Mrs. Subhashini, ANM) will operate the center from a small room in the village, recording visitor details, conducting screenings with portable devices, maintaining records, and referring individuals with abnormal readings to the nearest clinic or hospital.

4.3 What materials or resources are needed?

Digital blood pressure monitor, glucometer with test strips and lancets, pulse oximeter, digital weighing scale, height measurement scale/stadiometer, a table, chairs, and basic record-keeping materials.

Section 5: Location & Operations

5.1 Where will the business operate? (Village / Area / Street)

Naduvakkarai village, Thirukalukundram Taluk, Chengalpattu District – a small room within a volunteer's home or a community building that can be securely locked to store the equipment when not in use.

5.2 Who will be involved? (Names and Contact Details with Address)

Name of Individual / Group / Youth Group / Family / Cooperative / Self-Help Group / Others:	Mrs. Subhashini – Auxiliary Nurse Midwife (ANM), RUWSEC
Address:	Naduvakkarai Village, Thirukalukundram Taluk, Chengalpattu District
Phone Numbers:	9566951588

5.3 What tools or equipment are required?

Digital blood pressure monitor, glucometer, glucose test strips & lancets, pulse oximeter, digital weighing scale, height measurement scale/stadiometer, table, chairs, and record-keeping materials.

5.4 Daily / Weekly / Monthly activities of the proposed Business Plan:

The center will operate daily during morning and evening hours for walk-in patients, with home visits for elderly or disabled residents when needed. A trained volunteer will record visitor details, conduct screenings, maintain records, and refer abnormal cases to the nearest hospital. Monthly health awareness sessions will be organized to promote preventive healthcare.

Section 6: Cost & Investment

6.1 Initial Investment Needed (Rs.):

Materials (Rs.):	Rs. 600 (Glucose test strips & lancets – initial stock)
Equipment (Rs.):	Rs. 4,000 (BP monitor Rs.1,000 + Glucometer Rs.500 + Pulse oximeter Rs.900 + Weighing scale Rs.700 + Height scale Rs.900)
Transport (Rs.):	N/A
Other Costs (Rs.):	N/A
TOTAL (Rs.):	Rs. 4,600

6.2 Source of Funds: (Savings / Loan / Government Scheme / etc.)

The equipment will be supported through college-based funding initiatives, community contributions, or donations from local organizations and well-wishers, depending on availability.

Section 7: Pricing & Revenue

Price of Product / Service (Rs.):	Blood Pressure Check: Rs. 20 | Blood Sugar Test: Rs. 50 | Basic Health Screening (BP, Weight, Height, Oxygen Level): Rs.30 per person
Estimated Number of Sales per Day / Week:	Approximately 10 people per day, 25 working days per month
Expected Income (Rs.):	Rs. 7500 per month (Rs. 300/day average)

Section 8: Profit Estimation

Total Expenses (Rs.):	Rs. 3,000 per month
Total Income (Rs.):	Rs. 7,500 per month
Estimated Profit (Rs.):	Rs. 4,500 per month

Section 9: Marketing & Sales Strategy

9.1 How will you inform people about your business? (Word of mouth, posters, social media, local market, etc.)

Primarily through word-of-mouth, shared during village meetings, health awareness sessions, and community gatherings.

9.2 Where will you sell your product/service?

From a small room in Naduvakkarai village (within a volunteer's home or community building), operating during morning and evening hours for walk-in patients, with home visits for elderly, disabled, or otherwise unable individuals.

Section 10: Challenges & Solutions

10.1 Possible challenges: (e.g., transport, weather, competition, finance)

1) Low awareness of preventive healthcare among villagers.
2) Limited availability of medical supplies such as glucometer test strips, batteries, and disposable materials.
3) Delays in hospital referrals due to financial or transportation constraints.

10.2 How will you overcome them?

1) Conduct regular health awareness sessions with support from local governing bodies, SHGs, and community volunteers.
2) Allocate part of the service income or community contributions for replenishment and seek support from NGOs, RUWSEC, or local health initiatives.
3) Provide clear referral guidance, maintain follow-up records, involve family members in counselling, and coordinate with local health workers to encourage timely medical consultation.

Section 11: Social Impact

11.1 How does your business help the community? (Employment, environment, livelihood, education, health, animal welfare, etc.)

Improves community health through early detection of conditions such as hypertension and low oxygen levels; creates local employment by training and engaging village youth to assist with health awareness and operations; reduces unnecessary travel to distant healthcare facilities, saving time and transportation costs for families.

11.2 Does it support sustainability or the environment? How?

Yes. The center follows environmentally responsible practices by using digital record-keeping wherever possible to reduce paper usage, disposing of medical consumables responsibly per local health guidelines, and reducing travel-related emissions through in-village home visits. Awareness sessions also promote healthy lifestyles, lowering the long-term environmental burden of avoidable healthcare needs.

Section 12: Future Plans

12.1 How will this business grow in the future?

The center can expand by adding more health parameters, increasing operating days, training additional local volunteers, and building tie-ups with nearby PHCs or NGOs for subsidized medicines and referral support.

12.2 Any new ideas or improvements?

Introducing periodic mobile health camps to cover neighbouring areas, exploring basic telemedicine consultations with doctors, and organizing awareness drives linked to government health insurance schemes.

Section 13: Reflection (Student Learning)

13.1 What did you learn from this project?

13.2 How will you connect this proposal with your classroom learning?

Upload: Business Photos / Documents	*(Attach relevant files / photos)*

Evaluation Rubric - Total: 20 Marks

Criteria	Description
Business Idea	Innovative, practical, useful, and clearly explained
Marketing & Sales Strategy	Strong market understanding and realistic approach
Social Impact & Sustainability	Positive community impact and environmental contribution
Presentation & Clarity	Well-organized, professional, and easy to understand

Additional Assessment Considerations

Community Understanding

- Identifies local and social issues accurately
- Reflects on personal role in the community
- Evaluates impact of actions and participation
- Proposes practical solutions to local problems

Sustainability in Business

- Demonstrates sustainability practices in operations
- Identifies environmental impacts of business activities
- Makes reasoned conclusions supported by field observations

Reflection & Learning

- Connects academic concepts to real-world situations
- Demonstrates critical thinking and learning from field experience
- Shows meaningful personal and academic development
