DELIVERABLE 1 | GROUP CAPSTONE PROJECT

Company Profile: TasteBuds Restaurant Chain

Industry: Hospitality & Restaurant Chain	**Implementation Platform:** Odoo ERP Enterprise
Parent Entity: TasteBuds HQ (Central Hub)	**Operating Units:** Multi-Branch (Downtown, West End)

1. Executive Summary

TasteBuds Restaurant Chain is a multi-branch hospitality enterprise specializing in casual dining, quick service, and gourmet beverage concepts. Operating through centralized management and strategically distributed branch locations (such as *TasteBuds - Downtown* and *TasteBuds - West End*), TasteBuds delivers high-quality, made-to-order dishes crafted from fresh organic ingredients. To support rapid franchise expansion, lower food overhead costs, and maintain brand consistency, TasteBuds is migrating its operations onto a fully integrated Odoo ERP environment.

2. Multi-Branch Enterprise Architecture

The operational layout follows a centralized parent-child enterprise structure designed for streamlined procurement and decentralized guest fulfillment:

[TasteBuds HQ]

Central Management • Global Purchasing • Financial Oversight • Chart of Accounts

↓ ↓

[TasteBuds - Downtown Branch] **[TasteBuds - West End Branch]**

FOH Dining • BOH Kitchen • Sub-Warehouses • Local POS Terminals

3. Products & Services Portfolio

Category	Item Type / Description	ERP Product Configuration
Finished Dishes	Gourmet burgers (e.g., TasteBuds Special Burger), specialty pizzas, craft drinks, and desserts.	**Consumable / POS** Linked directly to automated Bill of Materials (BOM).
Raw Ingredients	Fresh beef patties, organic produce (tomatoes, lettuce), dairy, baking goods, and beverage syrups.	**Storable Product** Valuation via Automated FIFO; real-time tracking across cold storage.
Customer Services	Table-side dining, quick-service takeaway, custom dish modifications, and group catering.	Managed via POS Floor Plans, Kitchen Display System (KDS), and split-billing workflows.

4. Stakeholder Matrix

- **Customers:** Dine-in guests, takeaway customers, bar patrons, and corporate event clients expecting high food quality, fast table service, and transparent billing.
- **Suppliers & Vendors:** Regional organic farms, craft beverage distributors, meat processing facilities, packaging vendors, and kitchen equipment service providers.
- **Internal Operations:**
  - *Front-of-House (FOH):* Waitstaff, Cashiers, Floor Supervisors, Bar Managers.
  - *Back-of-House (BOH):* Head Chefs, Line Cooks, Kitchen Expediters, Dishwashers.

- *Central Management:* Central Purchasing Officers, Inventory Controllers, Chief Accountant, CEO.

5. Key Business & Operational Challenges

1. Ingredient Spoilage & Food Waste: High raw material loss due to manual stock monitoring and lack of automated reorder rules for perishable ingredients.

2. Kitchen & Table Service Bottlenecks: Communication gaps between waitstaff taking orders and line cooks, leading to high order prep times and guest dissatisfaction.

3. Inaccurate Dish Costing & Margin Loss: Fluctuating raw commodity prices without dynamic Bill of Materials (BOM) cost calculations leading to erosion of gross profit margins.

4. Procurement Inefficiencies: Uncoordinated purchasing across branches resulting in missed bulk pricing, excessive shipping costs, and unverified vendor payments.

5. Multi-Branch Reporting Deficit: Management lacks consolidated real-time dashboards for branch sales, inventory turnover, and financial performance.

6. Strategic Growth Objectives

1. **Operational Synchronization:** Seamlessly integrate front-of-house table ordering with back-of-house kitchen displays and central inventory deduction.
2. **Automated Stock Replenishment:** Enforce automated reordering rules with minimum/maximum inventory thresholds to eliminate stockouts and minimize spoilage.
3. **3-Way Vendor Matching:** Enforce strict purchasing compliance (PO vs. Inventory Receipt vs. Vendor Bill) before processing payments.
4. **Executive Visibility:** Empower leadership with live analytical dashboards (CEO, Sales, Inventory, Finance) for data-driven expansion decisions.
