Odoo ERP Setup & Configuration Guide

TasteBuds Restaurant Chain Implementation

Step-by-Step Module Configuration for P2P, O2C, and Ticket-to-Table Processes

1. System Architecture & Module Installation

To support the TasteBuds operations, install the following core Odoo applications from the **Apps** dashboard:

Odoo Application	Target Process	Key Functionality
Point of Sale (POS)	O2C & Ticket-to-Table	Table layout mapping, order entry, payment collection, KDS integration.
Purchase	Procure-to-Pay (P2P)	Requisitions, RFQs, vendor management, Blanket Orders.
Inventory	P2P & Ticket-to-Table	Multi-location warehouses, ingredient valuation (FIFO), stock receipts, scrap tracking.
Invoicing & Accounting	P2P & O2C	3-way vendor matching, POS daily journal reconciliation, Chart of Accounts, Bank Sync.
Employees (HR)	All Processes	Role-based permissions (Chef, Waitstaff, Central Purchaser, Accountant).

2. Master Data & Base Configuration

Step 1: Multi-Company & Branch Configuration

- Navigate to **Settings > Companies**. Set up "TasteBuds HQ" as the parent company and create branch locations (e.g., "TasteBuds - Downtown", "TasteBuds - West End").
- In **Settings > General Settings**, enable *Multi-Companies* and *Multi-Warehouses*.

Step 2: Users & Access Rights Matrix

- Go to **Settings > Users & Companies > Users**.

- **Head Chef** / **Branch Manager:** Access restricted to Purchase (User/Requisitioner), Inventory (User), POS (User).
- **Central Purchasing Officer:** Access granted to Purchase (Administrator), Inventory (User).
- **Kitchen Expediter** / **Line Cook:** Access granted to POS / Kitchen Display System only.
- **Accountant:** Access granted to Invoicing/Accounting (Administrator).

Step 3: Warehouses & Inventory Locations Setup

- Navigate to **Inventory > Configuration > Warehouses**.
- Create Warehouses for each branch (e.g., *TB-West Warehouse*).
- Configure Sub-locations under **Inventory > Configuration > Locations**:
  - `TB-West/Main Kitchen` (Cold Storage & Pantry)
  - `TB-West/Scrap Location` (Food Waste & Spoilage)
  - `TB-West/POS Bar` (Beverage Inventory)

Step 4: Product Masters & BOMs (Bill of Materials)

- Go to **Inventory > Products > Products**.
- **Raw Ingredients (e.g., Fresh Beef, Tomatoes):** Set Product Type to *Storable Product*, Invoicing Policy to *Received Quantities*, Costing Method to *FIFO / Automated Valuation*.
- **Finished Dishes (e.g., TasteBuds Special Burger):** Set Product Type to *Consumable / POS Product*, enable *Available in POS*.
- Go to **Manufacturing** / **POS > Bill of Materials**: Link 1 Burger to exact quantities of Raw Beef, Buns, and Tomatoes for real-time inventory deduction.

3. Module Configuration by Process Flow

Process 1: Procure-to-Pay (P2P) Module Setup

Configuration Steps in Odoo:

1. Purchase App Enable **Purchase Agreements (Blanket Orders)** and **Purchase Order Approvals** in *Purchase > Configuration > Settings*. Set minimum approval threshold (e.g., $500).
2. Inventory App Set up **Reordering Rules** in *Inventory > Operations > Reordering Rules* for raw ingredients. Define Minimum and Maximum quantities for automated draft PO generation.
3. Accounting App In *Accounting > Configuration > Settings*, enable **3-Way Matching** (PO vs. Receipt vs. Bill).

Step-by-Step Operational Execution:

- **Step 1 (Chef):** When stock drops below minimum, Odoo triggers an RFQ/Requisition. The Chef can manually adjust quantities under *Purchase > Purchase Requisitions*.
- **Step 2 (Purchasing):** Central Purchaser reviews requisitions, consolidates orders across branches, approves the draft PO, and emails it to the vendor from Odoo.

- **Step 3 (Kitchen Receiving):** Upon delivery, Kitchen staff opens *Inventory > Receipts*. Staff inputs received quantities. If goods are spoiled, click *Scrap* to divert items to the Scrap location. Validate Receipt to update live inventory stock.
- **Step 4 (Finance):** Accountant opens *Invoicing > Vendors > Bills*, attaches Vendor Bill, and verifies 3-Way Match badge (Matched). Click *Post* and then *Register Payment* to complete P2P.

Process 2: Order-to-Cash (O2C) Module Setup

Configuration Steps in Odoo:

1. POS App Go to *Point of Sale > Configuration > Settings*. Enable **Bar/Restaurant** features: Floor Plans, Table Management, Bill Printing, and Split Bill.
2. POS Payment Configure Payment Methods in *POS > Configuration > Payment Methods* (e.g., Cash, Credit Card Terminal Integration).
3. Accounting Sync Under POS Configuration, link the **Default Journal** to "POS Sales Journal" for daily aggregated posting.

Step-by-Step Operational Execution:

- **Step 1 (Waitstaff):** Customer completes meal and asks for the check. Waitstaff selects the table on Odoo POS and clicks *Bill* to print a preliminary receipt.
- **Step 2 (Cashier / Waitstaff):** Click *Payment*. Select payment channel (Cash/Card/Split). Input amount tendered.
- **Step 3 (System/Cashier):** If payment succeeds, click *Validate*. Table status resets to vacant, and transaction closes.
- **Step 4 (Finance):** At the end of shift, Cashier performs *Close POS Session* and enters cash count. Accountant opens *Accounting > POS Orders* to validate daily entries and sync bank journal entries.

Process 3: Ticket-to-Table (Kitchen Fulfillment) Module Setup

Configuration Steps in Odoo:

1. POS Kitchen Routing Go to *Point of Sale > Configuration > Kitchen Printers / KDS*. Map product categories to display routing:
   - *Grill & Fryer items* $ ightarrow$ Kitchen KDS Screen 1
   - *Beverages & Desserts* $ ightarrow$ Bar Display Screen 2
2. Preparation Stages Configure Kitchen Screen stages: *To Do $ ightarrow$ In Preparation $ ightarrow$ Ready $ ightarrow$ Served*.

Step-by-Step Operational Execution:

- **Step 1 (Waitstaff):** Waitstaff takes customer order at the table on a tablet POS and clicks *Order*.
- **Step 2 (KDS Display):** Order instantly pops up on the Kitchen Display System in the Back-of-House (BOH) with color-coded timers.
- **Step 3 (Line Cook):** Line Cook taps ticket stage to *In Preparation* while cooking dishes according to recipe standards.

- **Step 4 (Expediter QC):** Plate reaches expediter station. Expediter reviews plate quality against ticket and taps *Ready*.
- **Step 5 (Waitstaff Notification):** Notification alerts Waitstaff tablet. Food is delivered to the table, and ticket status updates to *Served*.

4. Dashboards & System Verification

Pre-Go-Live Verification Checklist:

- **CEO Dashboard:** Verify real-time consolidated sales across branches, gross margin %, and top-selling dishes.
- **Inventory Dashboard:** Ensure automatic valuation (FIFO) accounts correctly for ingredient usage upon POS order validation.
- **Finance Dashboard:** Verify 3-way matching rules prevent bill validation if PO and Receipt quantities mismatch.
