Digital Enterprise Transformation for TasteBuds

ERP Consulting Challenge
Capstone Project

Presented by: Group 8 (ERP Consulting Company)

Client: TasteBuds Restaurant Chain

Business Overview

- Company Name: TasteBuds
- Industry: Hospitality (Restaurant Chain)
- Products & Services: Dine-in services, Takeaway, Online Delivery, Catering
- Key Departments: Front of House (POS), Kitchen Operations, Procurement, Inventory, Finance, Human Resources
- Growth Objectives: Expand to new locations, streamline franchise operations, and enhance customer experience through omnichannel integration.

Key Business Challenges

- Siloed Systems: Disconnected POS, inventory, and accounting software.
- Inventory & Wastage: Inefficient tracking of perishable raw materials leading to food waste.
- Procurement Delays: Manual ordering processes causing stockouts of critical ingredients.
- Lack of Visibility: No real-time reporting on profitability, dish-level margins, or kitchen efficiency.

Process Models (Order-to-Cash)

- Objective: Streamlining customer ordering and payment.
- Process Flow:
- 1. Customer places order (POS/Website)
- 2. Order ticket sent to Kitchen (KDS)
- 3. Kitchen prepares and fulfills order
- 4. Customer completes payment
- 5. Receipt generated & Accounting ledger updated automatically

Process Models (Procure-to-Pay)

- Objective: Efficient sourcing of raw ingredients.
- Process Flow:
- 1. System detects low stock (Reordering Rules)
- 2. Request for Quotation (RFQ) sent to Supplier
- 3. Purchase Order (PO) confirmed
- 4. Goods Receipt & Quality Check at Warehouse
- 5. Vendor Bill validated and Payment processed

Process Models (Ticket To Table)

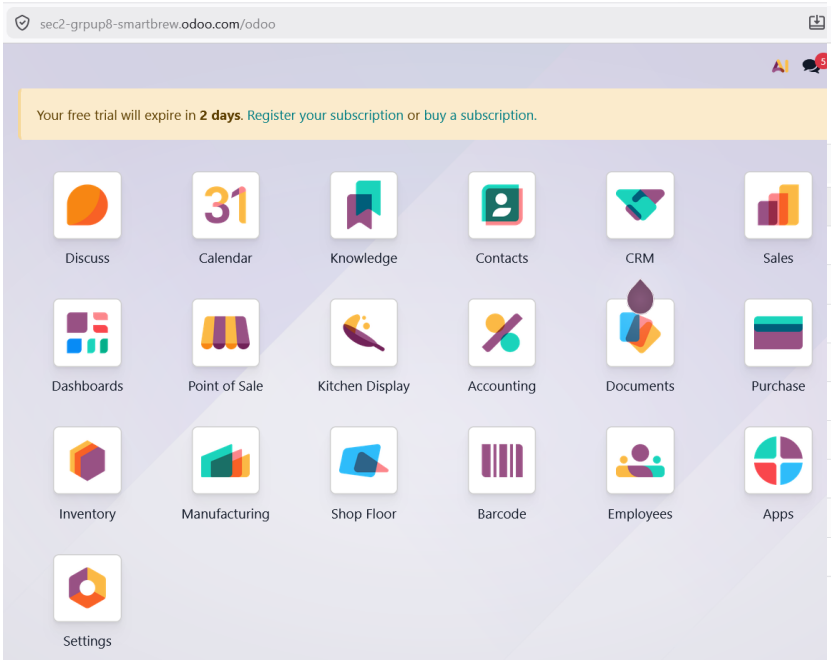

- Objective: Managing Bills of Materials (BOM) for menu items.
- Process Flow:
- 1. Define Menu Item (e.g., Burger) as a manufactured product
- 2. Setup BOM (Bun, Patty, Lettuce, Sauce)
- 3. POS sale triggers a manufacturing order
- 4. Stock valuation is updated based on consumed ingredients

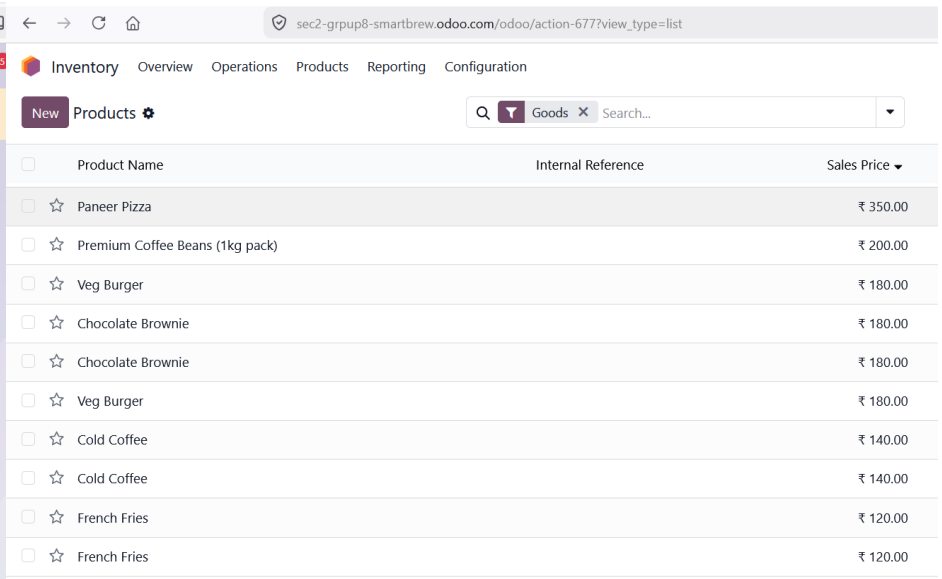

ERP Solution Design (Proposed Modules)

- Point of Sale (POS): For seamless front-of-house order management.
- Inventory: To track stock levels, manage expiration dates, and reduce waste.
- Manufacturing (MRP): To manage recipes (BOMs) and kitchen production.
- Purchase: To automate supplier orders for raw materials.
- Accounting: For real-time financial tracking and automated journal entries.
- Employees (HR): To manage staff shifts and payroll.

Odoo Configuration & Master Data

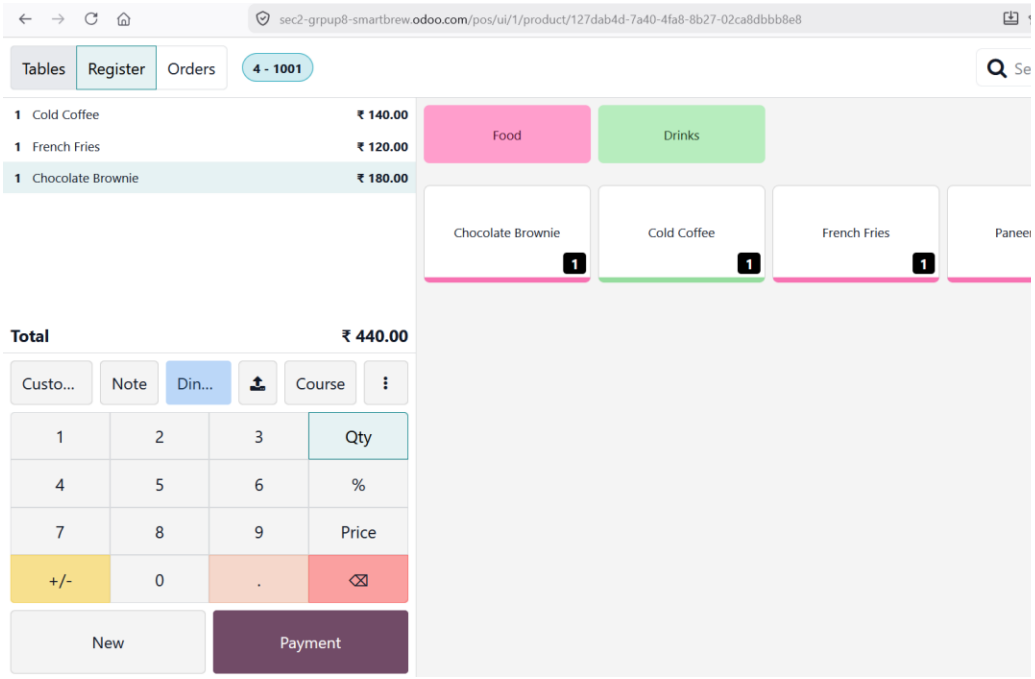

- Company Setup: Configured TasteBuds organizational structure.
- User Roles: Created roles for Cashiers, Chefs, Store Managers, and Accountants.
- Master Data - Products: Configured 'Consumables' (raw materials) and 'Storable Products' with corresponding BOMs.
- Master Data - Partners: Setup key Vendors/Suppliers and regular Customers.

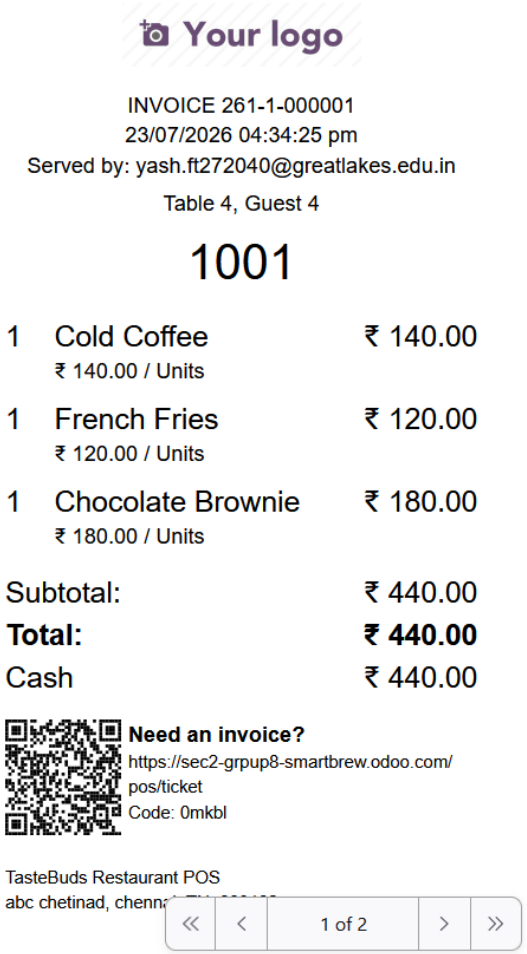

Odoo Demonstration (Sales & POS)

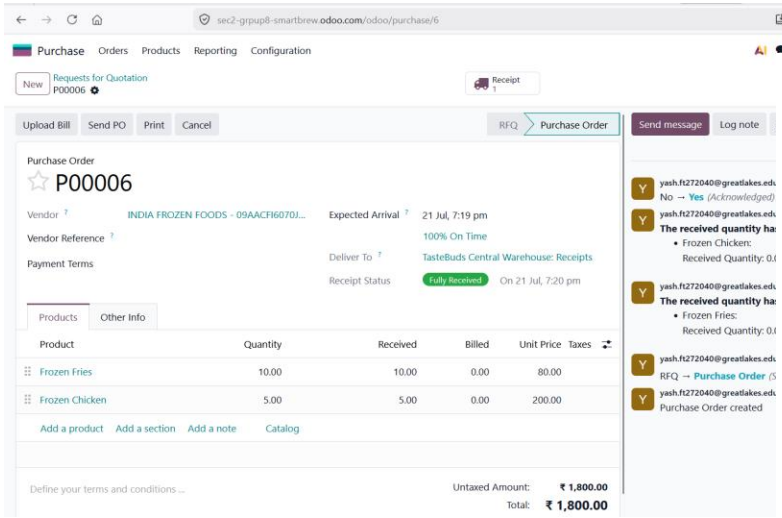

- Focus: Demonstrating the customer journey.
- Walkthrough: Taking a customer order through the Odoo POS interface and closing the session.
- [Odoo Demonstration]

Odoo Demonstration (Procurement & Inventory)

- Focus: Demonstrating backend supply chain management.
- Walkthrough: Creating a Purchase Order, receiving goods into the TasteBuds warehouse, and verifying stock updates.

Cross-Functional Integration

- The 'ERP Value': How information flows automatically across TasteBuds' departments.
- Example: A single sale at the POS immediately:
- - Deducts raw materials from the Inventory module.
- - Records revenue in the Accounting module.
- - Updates customer purchase history in the CRM/Sales module.

Business Insights & Dashboards

- Sales Dashboard: Tracking daily revenue and best-selling menu items.
- Inventory Dashboard: Monitoring stock levels and spoilage rates.
- Finance Dashboard: Overview of cash flow, expenses, and gross margins.

Industry 4.0 Roadmap

- IoT Smart Kitchens: Integrating smart refrigerators and ovens with Odoo to monitor temperature and energy usage.
- Automated Replenishment: Using IoT weight sensors in storage bins to automatically trigger Odoo Purchase Orders.
- Omnichannel Operations: Fully integrated mobile ordering, self-service kiosks, and POS systems.

AI Recommendations

- AI Demand Forecasting: Predicting peak dining hours and inventory requirements based on historical data.
- Personalized Menu Suggestions: Using machine learning to recommend add-ons to customers.
- Dynamic Pricing: AI models that adjust delivery pricing during peak demand to maximize margins.

Key Business Benefits & Conclusion

- Operational Efficiency: Eliminated manual data entry and reduced order processing time.
- Cost Reduction: Minimized food waste through accurate BOM management.
- Scalability: Built a standardized digital foundation for new restaurant locations.
- Data-Driven Decisions: Empowered management with real-time dashboards for strategic planning.
