Naukri: From Inception to Industry Leader

Launched in 1997, Naukri.com is **India's largest online job portal** that provides a comprehensive platform to connect millions of employers and job seekers. It started with a database of job listings collected from newspapers. Over the years, Naukri has seen tremendous growth while outperforming its competitors in every sphere and expanded across various industries and acquired businesses like **AmbitionBox**, **Jeevansathi.com**, etc.
Currently, **50–60% of overall hirings in the market** take place through the Naukri portal.

The brand's success can be attributed to its **early adoption of the internet, user-friendly interface**, and **continuous innovation** in the recruitment space. It has played a pivotal role in transforming the job search process in India, making it more accessible and efficient for millions of users.

- **Efficiency:** Efficient & seamless hiring experience

PAIN POINTS

- Frustrated by a high volume of irrelevant job notifications, particularly mid-senior roles
- Annoyed by repeated job listings and no response by recruiters
- Tired of applying in multiple job listings with little to no response by recruiters, especially with no follow-up process

User Journey on NAUKRI App

Assuming user who visits profile will not engage further because of an existing job.

Behind The Screen: Where The Tech Magic Happens!

Naukri leverages a robust tech stack, including **modern frontend frameworks** like **React.js** and **backend technologies** like **Java 17, Python, MySQL 8, MongoDB, Kafka**, etc., along with **microservices architecture**. Additionally, the team also relies on **AI-driven tools** for job recommendations and **data analytics** to enhance the platform's intelligence. This allows Naukri to offer a seamless user experience, scale efficiently, and maintain its leadership in the competitive job portal market.

But When Does The Bell Ring?

Job Seekers:

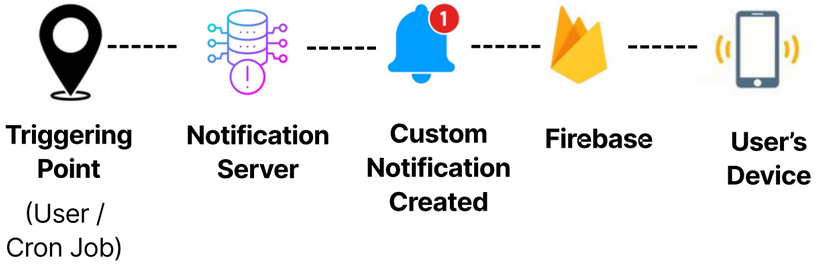

- Profile-based job recommendations
- Application status updates
- Company and recruiter engagement alerts
- Industry-specific news & opportunities

Employers and Recruiters:

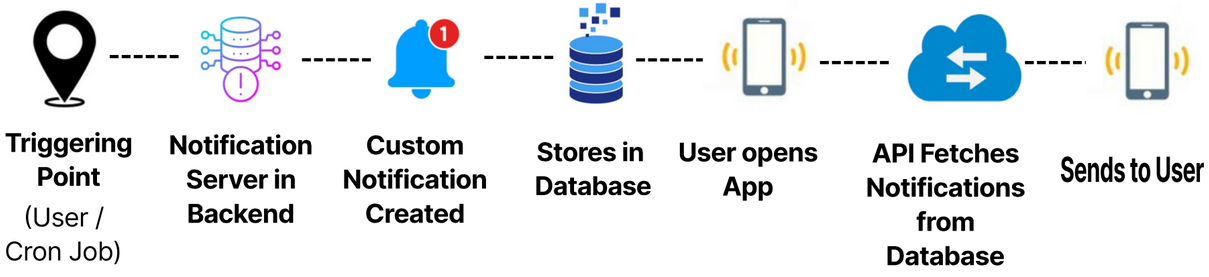

- Applications received & status updates
- Reminders for incomplete postings
- Candidate match alerts
- Industry and recruitment trend updates

Basic Architecture of a Notification System

Naukri App Interface: Tailored Notifications for Every Job Seeker!

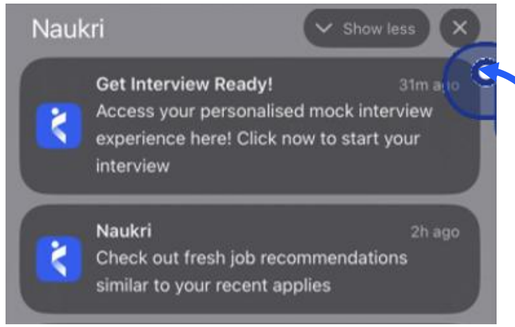

Beyond The Buzz: A Deep Dive Into **Naukri's** UX

Key UX Design Principles

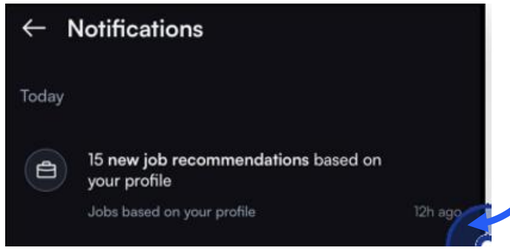

- **User-centricity**: Naukri's app is designed with the primary goal of meeting the needs of its users - job seekers and recruiters.
- **Personalization**: The app provides personalized job recommendations and notifications based on the user's profile, search history, and preferences, ensuring relevance and enhancing user satisfaction.
- **Uniform Design Language**: Naukri maintains consistency in its visual elements, such as buttons, icons, fonts, and colors, throughout the app. This consistency helps users predict how the app will behave and reduces the learning curve.
- **Simplicity and Minimalism**: Offers a clean, straightforward interface with essential features and minimal distractions.
- **Engagement and Motivation:** Uses gamification and personalized content to keep users engaged and motivated.
- **Visual Hierarchy**: Prioritizes important information with clear visual hierarchy and effective use of color.
- **Accessibility**: Naukri's app is likely designed to be accessible to a wide range of users, including those with disabilities. This could include features like scalable text, screen reader compatibility, and high-contrast color schemes for better visibility.
- **Usability:** The app features intuitive navigation and powerful search and filter functions, enabling users to quickly narrow down job listings or candidate profiles to find exactly what they need.

Push Notifications

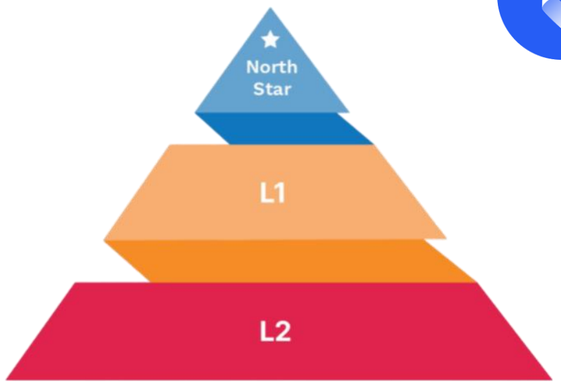

Frequent updates sent to users to nudge them for prompt action

In-App Notifications

Personalised alerts sent to users based on their activities while using the app

Alerts to Action: Key Metrics For Success!

NORTH STAR

Monthly Active Users (MAU) - The primary indicator of overall app Engagement, reflecting the number of unique users who engage With the app in a month through notifications.

L1

- **Notification Click-Through Rate (CTR):** % users who click on notification links.
- **Notification Open Rate:** % users who open notifications.
- **Conversion Rate:** The percentage of users who complete a desired action (e.g., applying for a job) after engaging with a notification.

L2

- **Time to First Interaction:** Average time it takes users to engage with a notification after receiving it.
- **Notification Opt-In Rate:** % users who opt-in to receive notifications.
- **Bounce Rate After Notification Click**: % users who leave the app shortly after clicking a notification.
- **Time Spent in App Post-Notification:** Average time users spend on the app after engaging with a notification.

Unlocking the Secret Sauce: Maximizing Notification Impact!

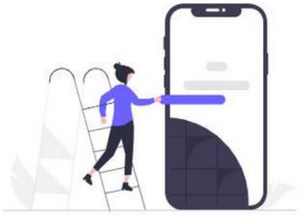

What Is Naukri Doing Right?

Personalization: Naukri has smartly done its user segmentation to send personalized notifications to both job seekers and recruiters to cater to their specific needs and interests, ensuring relevance & engagement.

Timely Updates: Naukri's notification system is generally reliable in delivering prompt alerts for for new job listings, application status, and interview reminders. This, along with news alerts and weekly updates to keep users informed without overwhelming them.

Intuitive Design: Naukri provides a user-friendly Ul with clear, concise notification messages and actionable buttons. Plus, the extensive options for managing notifications through settings are a great bonus!

Performance Reliability: Naukri's robust infrastructure ensures timely notification delivery while maintaining performance, even with increasing user demand and diversity.

Opportunities To Explore!

Smart Scheduling: Leverage machine learning to predict the best times to send notifications based on individual user habits, increasing the likelihood of engagement.

Expand Notification Channels: Explore additional channels like SMS or voice notifications for critical alerts, especially for users who might not always check the app.

Give More Power To Control What Users See: Allow users more control over the types of notifications they receive (e.g., job recommendations, application updates) to increase user satisfaction.

A/B Testing: Continuously test different notification designs and content to optimize engagement.

Feedback Loop: Actively gather user feedback and conduct experiments to refine personalization, ensuring recommendations closely align with user preferences.
